Educational attainment is an important public health measure. An adequate education is critical for reducing health disparities. Births to women with less than a high school education are more likely to be low birth weight or premature. Adults with low educational attainment are more likely to die early from cardiovascular disease, cancer and diabetes.

Graduation Completion Rate (Gr. 9-12): Based on the 2002-03 cohort, this is the percent who received their high school diploma on time or earlier by the end of the 2005-06 school year.

At/Above Criterion: This shows the percent of examinees who scored at or above the criterion score on either test (1110 on the SAT).
