About the Strategic Development Plan

More than 9 million passengers — an average of 25,000 per day — fly in and out of the San Antonio International Airport each year. In the next 20 years, that number could double to up to 18 million passengers per year.

To accommodate this growth and continue to generate prosperity, the Airport must keep up with the air travel needs of the community and region. So, the San Antonio Airport System launched a Strategic Development Plan process to focus on the next 20 years, and to examine the suitability of the site for growth and expansion in the next 50 years.
How this works
The data-driven Strategic Development Plan will produce options regarding land use, facilities, and services required for the airport system to accommodate the growth of the San Antonio region. The “will it fit?” in the current location question will be answered in late 2018; the entire study is expected to conclude in 2020.

Community engagement
San Antonio Airport System Strategic Development Plan encourages the community to be involved in the process through informal pop up meetings, public meetings, participation in existing community meetings, social media, webpage, newsletters, surveys, and stakeholder groups.
