

# SA PARKS SYSTEM PLAN

## APPENDIX C: PARKS, NATURAL AREAS, AND FACILITY INVENTORY

## Parks, Natural Areas, and Facilities Inventory

### Introduction

The attached inventory and base map are the basis for the SA Parks System Plan and represent the most up-to-date information available from the City of San Antonio.

#### Data Notes

- City of San Antonio GIS data is presented “as-is” with no modifications
- GIS inventory provided is dated November 2018
- Excel inventory file maintains the “ID NUM” field matching all inventory data back to the appropriate GIS shape

### Park and Facility Classifications

San Antonio’s park classifications and definitions were set in past planning efforts and are maintained here for consistency.

#### Park Classifications

- **Regional Park**  
Regional parks supplement neighborhood and community parks, serving broader community-based recreation needs in addition to those addressed by neighborhood and community parks. These parks may include large areas of undeveloped land with natural vegetation and/or water features. Park location is determined by the size, quality, and suitability of available sites. Restroom facilities and off-street parking should be provided for facility users. Park lighting should be for security and safety as well as facility use. Optimal size for a regional park is over 50 acres but each park is unique.
- **Community Park**  
A community park meets the recreational needs of several neighborhoods and may also preserve unique landscapes and open spaces. These parks accommodate group activities and recreational facilities that are not provided in neighborhood parks. Community park sites should be accessible by arterial and collector streets. Restroom facilities and off-street parking for facility users should be considered. Park lighting should be for security and safety as well as facility use. Optimal size for a community park is between 10 and 50 acres.
- **Neighborhood Park**  
Neighborhood parks are the basic unit of a park system and are recreational and social centers for those living in the nearby service area. Neighborhood parks are not intended to be used for programmed activities that attract city-wide users and that could result in overuse, noise, parking problems, and congestion. It is important for these parks to be easily accessible from throughout the neighborhood area, and for particular attention to be paid to non-vehicular access. Trails or sidewalks and low-volume streets may all be used to provide access. Playgrounds are usually a high priority. Restroom facilities

for users are not normally included because of access to home by users. Off-street parking should be minimal. Park lighting should be primarily for safety and security. Optimal size for a neighborhood park is from 3 to 10 acres.

- **Greenway**  
Greenways are linear features that emphasize harmony with the natural environment. Their purpose is to allow safe, uninterrupted pedestrian movement along both natural and/or manmade corridors. They will often follow suitable natural features such as rivers and creeks, but may also follow man-made corridors including revitalized waterways, drainage ways, utility easements, and abandoned railroad beds. Greenways may connect neighborhoods and/or natural landscape features and provide non-motorized transportation routes as well as recreation opportunities. Minimal infrastructure may include access, parking, signage, and security lighting as appropriate.
- **Natural Area**  
Natural Areas are park sites established for the protection and stewardship of outstanding natural attributes of local, regional, and statewide significance. Natural Areas are intended to be used in a sustainable manner for scientific research, education, aesthetic enjoyment, and appropriate public use not detrimental to the primary purpose. Minimal infrastructure may include access, parking, signage and security lighting as appropriate.
- **Historic Resource**  
Historic resources are sites, structures, buildings, and individual park items or features set aside to preserve and enhance their historic, cultural, and archaeological significance.
- **Sports Complex**  
Sports complexes consolidate programmed athletic fields and associated facilities at large sites which are to be strategically located throughout the community. Sports complexes, unlike neighborhood and community parks, are meant for city-wide use. These complexes should be located within reasonable driving distances of target populations, and adjacent to non-residential land uses. They relieve the negative impacts on smaller parks such as overuse; noise, traffic congestion, and parking issues. Adequate spectator seating and parking should be provided. Lighting should be for security, safety, and facility use.
- **Special Use Facility**  
Special use facilities have a broad range of single-purpose uses. The service area for these facilities is community-wide. Each facility is unique, and should be developed as determined with community input.
- **Urban Space**  
Urban space includes a broad range of remnant landscapes related to metropolitan area development including parkways, ornamental areas, medians, traffic islands, and minor drainage ways.

A wide variety of buildings, amenities, fields, courts and trails are included in the attached inventory table. Some of these are noted on the base map including:

- Community Centers
- Senior Centers
- School Parks (formerly SPARK Parks)
- Bicycle routes
- Park trails
- Park trailheads

The full tabular inventory is provided on the following pages.

NOTE: the plan document includes some updated numbers that include facilities under construction.

Park Name and Address	GENERAL INFORMATION										RECREATION FACILITIES										
	Council District	Park Classification	Historic Significance or Historic Facility	Total Acres	Developed Acres	Undeveloped Acres	Year Acquired	Method of Acquisition	Lease on Property	Managed and Operated by	Building Facilities				Park Amenities
