

CPS ENERGY
Quarterly STEP Report to the
CITY OF SAN ANTONIO

4th QUARTER
FOR CPS ENERGY FISCAL YEAR 2011

Prepared February 2011

Executive Summary

Ordinance 2009-05-21-0399 authorizes the funding of the CPS Energy conservation and sustainability STEP (Save for Tomorrow Energy Plan) program. The STEP Program is a demand management program designed to encourage customers to improve the energy efficiency of their homes, buildings and processes, thereby saving electricity and reducing system demand. The goal of the program is to save 771 megawatts (MW) of demand between 2009 and 2020. The 771 MW is equivalent to the amount of energy produced by a large power plant on an annual basis. To put this into perspective, the CPS Energy Spruce 1 power plant generates 575 MW and the newest Spruce 2 generates 750 MW of electricity.

In the short term, customers enjoy the benefits of a reduction in overall system fuel costs, which will produce savings for all customers. Those participating proactively in the programs like changing to compact florescent lamps (CFLs), installing high-efficiency air conditioning/heating units, installing a Peak Saver programmable thermostat, and home efficiency updates will lower their energy use and monthly bills. In the long term, customers will benefit from a delay in the need for additional generation capacity and the rate increases to support the additional capacity. In addition, approximately 111 contracting firms participated in our commercial and industrial rebate programs, 665 contracting firms participated in our residential rebate programs, and 24 contracting firms participated in our solar rebate programs.

For the purpose of accountability and transparency, specific procedures have been outlined and noted in City Ordinance. The quarterly reports are part of the accountability procedures used to assist City staff in evaluating the program in savings and total costs, which is estimated at \$849 million. The annual cost ranges from \$12.3 million to over \$77 million, with approximately \$8 million of which is currently recovered in the base rates and the remaining amount would be recovered through an adjustment in the fuel surcharge.

Since inception in CPS FY2009, CPS has a cumulative reduction of approximately 162 MW or 162,216 kilowatts (kW) of energy demand. The bulk of the energy reduction is from the CFL Program, which accounts for approximately 103 MW (103,469 kilowatts) or 64% of the reduction. While there are some residual CFL residual savings included in this report, the CFL Program was phased out early in the fiscal year due to market saturation of CFL bulbs. The challenge will be to find additional programs that will provide the level of demand savings comparable to the CFL Program.

Program Expectations

The use of demand side management energy programs such as STEP enables customers who participate directly in the program to lower their utility bills almost immediately. Those customers who do not directly participate still benefit in the short run because

lower kilowatt per hour system usage will reduce overall system fuel costs and produces fuel savings to all customers. All customers benefit in the long term as CPS will be able to postpone the need for building additional generation capacity and raising utility rates to finance the construction of new generation. For FY2011 the goal is to reduce the growth of peak demand by 45 MW (40,000 kilowatts).

Another program expectation exhibited in the City Ordinance is the STEP Funding Accountability Procedures CPS must follow. The procedures are listed below:

All funds collected for STEP programs, either from base rates or through the fuel adjustment, must be accounted for separately.

CPS Energy shall provide an annual report, prepared by an independent third party consultant, to the City which quantifies the kilowatt savings from STEP expenditures by customer class and other measures deemed necessary by the City.

Based on the report provided and the amount of STEP expenditures determined to be eligible for recovery through the fuel adjustment, CPS Energy will calculate the annual kilowatt per hour charge. It will be reviewed and approved by City staff before implementation of the kilowatt per hour charge.

City staff will monitor the recovery through the fuel adjustment on a monthly basis. Annually, the amount of under or over recovery, if any, will be determined and the fuel adjustment will be adjusted accordingly to ensure that only the amount of eligible STEP expenditures are recovered.

CPS Energy must maintain documentation of all STEP expenditures, by customer class and other measures deemed necessary by the City.

CPS Energy shall provide quarterly reports to the City staff which show year to date STEP expenditures by program and customer class, funds accumulated and estimated kilowatt savings and other measures deemed necessary by the City.

Examples of detailed quarterly report information include but are not limited to the following: number of kilowatt saved by customer class and program type; the number of participants and contractors; geographic area and council district program activity; and, total costs/expenditures by program type.

CPS Energy shall provide an annual report to the City which shows the incentive payments made as a result of the Commercial Demand Response program for the prior twelve months and other measures deemed necessary by the City.

A quarterly report detailing information shall be made available to the public with sufficient protection regarding confidential information as deemed necessary by the City.

Funding Recovery

The total cost of the STEP Program during the 2009 to 2020 time period is estimated at \$849 million with an annual cost ranging from \$12.3 million to over \$77 million, of which approximately \$8 million annually is to be recovered in base rates. The remaining annual amount would be recovered through an adjustment in the fuel surcharge. The cost recovery would occur in the following fiscal year and be subject to third party

review and verification of incremental kilowatt reduction. Customers could offset the additional costs of these fuel surcharges by implementing some of the STEP energy efficiency measures.

The CPS Energy fiscal year runs from February 1st through January 31st, and the fiscal year is denoted by the year in which the fiscal year ends. For example, CPS FY 2009 would be the period from February 1, 2008 through January 31, 2009.

For the CPS FY 2009, STEP expenditures totaled \$11,489,514, and after removing the \$8 million of base rate recovery, there was \$3,489,514 to be recovered in the adjustment to the fuel surcharge. As of July 31, 2010, CPS had the following recoveries for this adjustment:

Recoverable Amount	Amount Recovered as of 07/31/10	Under/(Over) Recovery
\$3,489,514	\$4,060,315	(\$570,801)

For the calculation of the FY 2010 adjustment to the fuel surcharge listed below, a majority of this Over Recovery was taken into account, and the remaining amount will be taken into account when the FY 2011 fuel surcharge adjustment is calculated.

FY	Incremental STEP Cost	Recovery Period	Est. Monthly Impact on Fuel Charge		
			Residential Impact per 1,000 kWh		
			STEP	Fuel Savings	Net
2009	\$3.5M	Jul09-Jul10**	\$0.21	(\$0.21)	\$0.00
2010	\$11.7M	Aug10-Jun11	\$0.77	(\$0.41)	\$0.36

**Note: Recovery Period for FY 2009, originally Jul09-Jun10, was extended thru Jul10 while City staff evaluated FY 2010 expenses.

As noted above, a new STEP recovery factor was implemented in August 2010, with recovery going through June 2011. This recovery factor was based on the CPS FY2010 STEP expenditures of \$20,442,063, and once the base rate recovery and the over recovery from the previous period was removed, this left \$11,671,707 to be recovered in the adjustment to the fuel surcharge. The following table shows the status of this recovery from August 2010 through January 2011:

Amount to be recovered Aug 2010 – Jan 2011	Amount Recovered Aug 2010 – Jan 2011	Under/(Over) Recovery
\$6,801,012	\$6,943,735	(\$142,723)

Residential Programs

Compact Fluorescent Lamps (CFL) Program – This program targeted specific areas of the city lower in market penetration culminating in a marketing blitz by HEB in April 2010. Costs and savings of this program are included in the current report. The CFL program is phased out and will be replaced eventually by other programs focused on the next step in efficient lighting technology.

Home Efficiency Program – targets a wide range of energy efficiency measures that save cooling and heating energy in existing homes. The list includes:

- Ceiling Insulation
- Cool Roof
- Duct Repair and Duct Sealing
- ENERGY STAR[®] Windows
- Spray Foam Insulation
- Wall Insulation
- Window Film or Solar Screens

HVAC Program – provides customers with rebates for the purchase of eligible central air conditioners, heat pumps and room air conditioners.

Peak Saver Program – a residential air-conditioner demand response control program. CPS Energy will install a free Honeywell programmable thermostat in participating customers' homes when they enroll in the program. The thermostat is used by CPS to cycle off the compressor of participating air conditioners during periods of peak demand throughout the summer (May – September).

Solar Photovoltaic & Water Heaters – provides incentives for the installation of both solar photovoltaic systems and solar water heaters.

Wash Right – a collaborative energy efficiency program with San Antonio Water System (SAWS) and Bexar Metropolitan Water District (BexarMet). The program is designed to achieve energy and demand savings as well as reduce residential water consumption through the use of high efficiency clothes washers. In addition, to any rebates provided by the aforementioned agencies, CPS Energy provides a direct rebate to the customer for the purchase of a high efficiency unit. This program was discontinued by SAWS and BexarMet December 31, 2010; however, CPS has paid rebates for these units through the end of CPS FY 2011.

Commercial Programs

Lighting – offers incentives to customers who install efficient lighting in their facilities. Incentives are offered for both retrofit and new construction projects.

HVAC Program – offers incentives for the installation of high efficiency unitary AC equipment, heat pump and chillers.

Motors, Windows & Roof Coating Programs – offers incentives for the installation of high-efficiency motors, reflective window coatings and reflective roofing.

Other Commercial Programs – includes incentives for the installation of custom projects, mainly involving the installation of efficient commercial kitchen appliances.

Administration and Marketing Expenses

Through the 4th Quarter of CPS FY2011, the STEP Program incurred administration and marketing expenses of \$2,671,077, of which \$1,219,450 was related to marketing expenses. Administration and marketing expenses accounted for approximately 9.6% of the total STEP 4th Quarter fiscal year-to-date expenditures.

CPS FY2011 4th Quarter STEP Report

Attachment A illustrates the kW reduction and dollars expended for the various commercial and residential efficiency and demand response programs. This data is presented for both the 4th Quarter only, as well as the cumulative amounts for the CPS Energy FY2011. Since the fiscal year for CPS Energy runs from February 1st to January 31st, the 4th Quarter covers November 1, 2010 through January 31, 2011. There are nominal savings for the CFL program listed for the 4th Quarter, however; these savings we actually achieved during the 1st Quarter of the fiscal year, but were not reported in the 1st or 2nd Quarter reports. These savings are noted in the cumulative amounts.

Attachment B shows the same kW reduction and dollars expended, but for the 3rd Quarter of CPS FY 2011. It should be noted that the Peak Saver data only reflects those units installed within the respective quarters of this fiscal year.

Attachment C shows the same kW reduction and dollars expended, but for the 2nd Quarter of CPS FY 2011.

Attachment D shows the same kW reduction and dollars expended, but for the 1st Quarter of CPS FY 2011.

Attachment E shows the cumulative number of rebates broken down by City Council District. The table shows the numerical values, and the charts are a graphical

representation of the numerical data. This attachment does not include Peak Saver, Demand Response installations, as these are demand response programs and not energy efficiency per se, nor does it include New Construction installations as these rebates are provided directly to home builders and not to individual customer accounts. Attachments F, G, H and I represent the same data, but for the 4th, 3rd, 2nd and 1st Quarters respectively.

Attachment J shows the cumulative rebate dollars broken down by City Council District. The table shows the numerical data, and the charts are a graphical representation of the numerical data. This attachment does not include Peak Saver, Demand Response installations, as these are demand response programs and not energy efficiency per se, nor does it include New Construction installations as these rebates are provided directly to home builders and not to individual customer accounts. Attachments K, L, M and N represent the same data, but for the 4th, 3rd, 2nd and 1st Quarters respectively.

Attachment O illustrates the cumulative rebate locations overlaid on a map of Bexar County and the City Council Districts. As with Attachments E – N, Peak Saver installations are not included in the data, as Peak Saver is a demand response and not an energy rebate program.

Attachment P illustrates the cumulative rebate locations overlaid on the various census tract income segments.
